INSTALLATION NOTES

- **RH** refers to the passenger side of the vehicle.
- **LH** refers to the driver side of the vehicle.
- Always use the proper torque specifications.
- If applicable to this installation, torque specifications will be listed throughout the document and at the end as well.
- Please read all of these instructions and familiarize yourself with the complete process **BEFORE** you begin.

GENERAL PREPARATION AND SAFETY INFORMATION

ECS Tuning cares about your health and safety. Please read the following safety information. This information pertains to automotive service in general, and while it may not pertain to every job you do, please remember and share these important safety tips.

- Park your car in a safe, well lit, level area.
- Shut the engine off and remove the key from the ignition switch.
- Make sure any remote start devices are properly disabled.
- **ALWAYS** wear safety glasses.
- Make sure the parking brake is applied until the vehicle is safely lifted and supported.
- If using an automotive lift, be sure and utilize the factory specified lift points. Lifting a vehicle in an incorrect location can cause damage to the suspension/running gear.
- When lifting a vehicle using a jack, always utilize the factory specified lift points. Lifting a vehicle in an incorrect location can cause damage to the suspension/running gear. **ALWAYS** support the vehicle with jack stands.
- Always read and follow all safety information and warnings for the equipment you are using.

Never get underneath a vehicle that is supported only by a jack. Always make sure that the vehicle is securely supported on jack stands.

INSTALLING THE LED BULBS

Step 1:

The first step is to remove the original lamp assembly.

On some vehicles, the lamp is held in place to two screws, typically requiring a phillips screwdriver for removal.

On some vehicles, the lamp is a push-in style, held in place by a clip on the housing. These lamps will just pry out using a non-marring trim tool.

Step 2:

To remove the push-in style of lamp, gently pry out one end, then guide the wire connector and wires through the hole

NOTE

If you are installing a new lamp assembly with integrated LED's simply unplug the old lamp, plug in the new one and reinstall it.

INSTALLING THE LED BULBS

Step 3:

To remove the screw-in style of lamp, simply remove the two screws and lower the lamp out. Some lamps may come out as a lens and housing together, others may come out with just the lens and bulb, as shown here.

Step 4:

Flip either style of lamp over to expose the bulb. Remove the bulb by spreading the contacts and lifting the bulb out.

INSTALLING THE LED BULBS

Step 5:

Install the new LED bulb in between the contacts. Make sure the heat sink is facing up so the LED's will shine out of the lens.

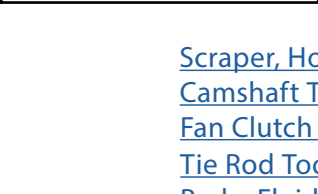

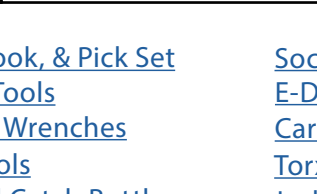

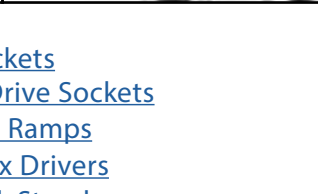

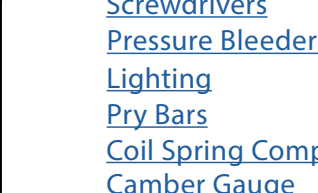

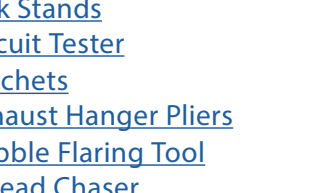

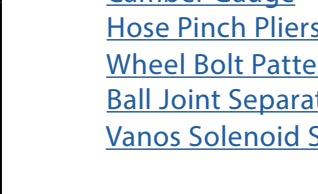

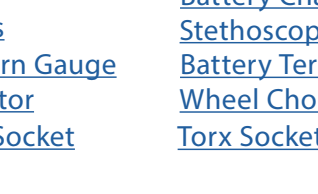

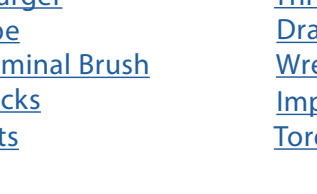

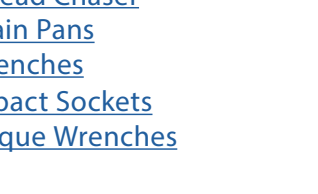

Step 6:

Install the lamps back into the car and check the operation. The polarity of LED bulbs will only allow them to work in one direction. If they do not illuminate, remove the bulb and flip it around and your problem will be solved.

SCHWABEN - BUILD THE ULTIMATE TOOL COLLECTION

At ECS Tuning, we carry a line of high quality Schwaben Tools and Equipment to help you build your ultimate tool collection. Never before has affordability and quality been so closely related. Our entire Schwaben line is subjected to strict in house testing for strength and durability. See what we have to offer and equip your garage without breaking the bank.
